

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A built-in lamp comprising a ~~holder for securing~~ housing ~~having an open end and adapted to be secured~~ in an installation surface, ~~in particular in a room ceiling,~~ a bulb fitting and a first reflector ~~which consists at least of one first reflector region which is followed in the direction of illumination by~~ on a top surface of said housing and a second reflector ~~region which can be released~~ positioned between said first reflector and said open end of said housing, said second reflector releasable from the ~~first reflector region~~ housing to permit a change of the a bulb, ~~with the~~ wherein said first reflector ~~region being made as an additional reflector and the~~ reflects light around an outer periphery of said second reflector ~~region being made as~~ and said second reflector forming a direct light reflector, and wherein a reflector opening of the direct light reflector disposed in the direction of illumination defines a direct light discharge region which is surrounded at least regionally by a diffuse light discharge region, characterized in that ~~the diffuse light discharge region is terminated by a plate which can be released, together with the direct light reflector secured to it, from a housing or from a frame of the built-in lamp~~ a plate extends between said second reflector and said housing and covers the diffuse discharge region, said plate being attached to said second reflector so that said second reflector and said plate are removable from the housing as a unit to provide access to the bulb for changing the bulb.

2. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that the plate ~~is made as~~ comprises a light scattering plate ~~or as a perforated metal sheet in the~~ diffuse light discharge region.

3. (Previously presented) A built-in lamp in accordance with claim 1, characterized in that the plate covers both the diffuse light discharge region and the direct light discharge region, with it being made transparent in the direct light discharge region.

4. (Previously presented) A built-in lamp in accordance with any one of the claims 1 or 2, characterized in that the direct light discharge region is made open.

5. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that the second reflector region together with the plate ~~can either be pivoted~~ is pivotal away ~~or from and completely released~~ releasable from the ~~first reflector region housing~~.

6. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that the bulb fitting and the first reflector region are arranged in a housing which is ~~in particular~~ light-proof ~~and/or~~ and dust-proof and at which the second reflector region with the plate is hingedly supported or to which it can be fastened by means of a releasable ~~screw connection; magnet connection; clip connection; latch connection or bayonet connection~~ fastener.

7. (Currently amended) A built-in lamp in accordance with claim ~~[[1]]~~ 3, characterized in that the second reflector region has a reflector opening which is disposed in the direction of illumination and which is terminated in ~~an-at-least~~ a substantially dust-proof manner by ~~the translucent or transparent~~ said plate.

8. (Currently amended) A built-in lamp in accordance with claim 6, characterized in that the housing is terminated in ~~an-at-least~~ a substantially dust-proof manner by the second reflector region releasably secured together with the plate to the housing.

9. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that the first and second reflector regions adjoin one another ~~at-least~~ sectionally.

10. (Previously presented) A built-in lamp in accordance with claim 1, characterized in that a light passage region is formed between the additional reflector and the direct light reflector.

11. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that a single bulb in said bulb fitting illuminates both the direct light discharge region and the diffuse light discharge region ~~can be acted on by a common bulb attachable in the bulb fitting~~.

12. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that said bulb illuminates the diffuse light discharge region ~~can be acted on~~ only indirectly via the additional reflector by a bulb attachable in the bulb fitting.

13. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that the ~~additional~~ first reflector is formed ~~at-least partly~~ by at least one ~~planar or pre-determinably curved or kinked~~ reflector surface, ~~in particular a pre-determinably rotationally symmetrically curved or kinked reflector surface~~, which ensures a pre-determinable splitting of

the portion of the reflected light directed to the direct light discharge region and to the diffuse light discharge region.

14. (Canceled)

15. (Currently amended) A built-in lamp in accordance with claim 1, characterized in that the second reflector ~~region~~ has a cut-out for a passage of ~~[[a]]~~ the bulb attachable in the bulb fitting ~~in its edge region facing the first reflector region.~~

16. (Currently amended) A built-in lamp in accordance with claim 6, characterized in that the housing, substantially has a parallelepiped shape ~~and a bulb attachable in the bulb fitting,~~ the bulb having an elongated shape, with the longitudinal axis of the bulb fitting extending in a plane extending parallel to the installation surface along a diagonal of the housing of parallelepiped shape.
